ATMOSPHERE
BONDING CLIENT

RELIABLE, CONSISTENT, PLUG-AND-PLAY

THE CLIENT FOR ONSITE INTERNET CONNECTIVITY

ATMOSPHERE BONDING CLIENT - FAILSAFE STREAMING SOLUTION

Atmosphere Bonding Client - the plug-and-play solution helping you to cope with low bandwidth or inconsistent internet connectivity on-site. Reinforce your landline internet connection with a range of mobile internet units, using LTE or 5G with state of the art antennas and routers. Your main internet connection will be boosted utilising true bonding and the supporting mobile units will provide a reliable backup in case your local internet goes down or suffers from bandwidth drops.

KEY FEATURES

- Using link aggregation, Atmosphere Bonding will combine several internet connections, making it the backbone of your streaming production

- In bonding mode, bandwidth of the the attached mobile routers and the local internet interface are bundled, to provide one common internet access point with a maximum bandwidth

- In backup mode, drops and peaks on your local internet connection will be compensated by the mobile routers, giving you one highly reliable internet connection

BENEFITS

- We will provide you with a compact and rack-mountable router that sits in between your local internet interface and your streaming equipment

- Up to four mobile routers and corresponding LTE / 5G antennas connect to the Bonding router, supporting or backing-up your internet connectivity

- The mobile units come equipped with preinstalled SIM cards, utilising different network carriers and corporate scaled flatrates

- True bonding can save your online event in case the main line goes down
