VERSATILE MULTI-CHANNEL CLOUD RECORDING

ATMOSPHERE MODULE - CLOUD RECORDER

The Atmosphere Cloud Recorder is a powerful addition to the Atmosphere B2B Media Cloud - designed to make recording and archiving streaming content easier and more efficient. With the ability to use any device as an encoder for ingesting a stream, it also supports up to 10 recording channels. The Cloud Recorder is a versatile tool that can handle even the most demanding streaming workflows.

KEY FEATURES

- **Multi-Channel Recording:** With up to 10 recording channels. Supports a range of popular streaming protocols, including RTMP, RTSP, SRT, and MPEG-TS
- **Device Agnostic:** Any device can be used as an encoder or for ingesting a stream into the cloud - Record content from virtually any source
- **Availability:** The cloud recorder immediately transmits your recording to the File Manager for further use

BENEFITS

- **Simplified Workflow:** The Cloud Recorder is part of the Atmosphere B2B Media Cloud. Record, store, and distribute any type of content all in one place
- **Time Efficiency:** With instant cloud availability, the Atmosphere Cloud Recorder enables our customers to quickly access and distribute their recorded content
- **With the possibility to record in the B2B Media Cloud, bandwidth is saved, eliminating upload and download processes**
